The screenshot shows a web application window titled "Hotel booking". Inside, there is a "Booking Form" with the following fields: Name (bulitha), Address (galle), Room Type (Single), Number of Room (empty), and Number of Days (empty). There are buttons for "Calculate the Price", "Clear", and a dropdown for "Do you want to another booking". A modal message box is displayed in the center with a red 'X' icon and the text "Form is incomplete or invalid input".

This screenshot is similar to the previous one, but the "Number of Room" field contains the letter 'A' and the "Number of Days" field contains the '@' symbol. The modal message box still displays "Form is incomplete or invalid input".

- If some user not select item in Another booking combo box, by default choice is get as "No"
- If some user not select item in Room type combo box, message box will appear.

The screenshot shows the "Hotel booking" application. In this instance, the "Room Type" dropdown menu is empty (no selection). The "Number of Room" and "Number of Days" fields are both filled with the value '1'. The "Do you want to another booking" dropdown is set to "Yes". A modal message box titled "Incomplete Form" is shown with a red 'X' icon and the text "Select Room Type".
